

A-11450-SF Safety Fuse Installation Instructions

Disconnect Battery! Bolt your safety fuse onto the engine side of the starter switch using the same screws that attach the switch. (Note: if the screws are too long and penetrate the starter body by more than 1/4" a short will result) Remove the wire coming from the terminal box at the starter switch and attach it to the empty screw on the safety fuse. Attach the yellow wire from the safety fuse to the bolt on the starter switch along with the battery cable. Replacement 30 amp fuses can be purchased at any auto supply store.
